## Is 3DEEP® Fractional Skin Resurfacing (FSR) right for me?

3DEEP Fractional Skin Resurfacing is used worldwide for the treatment of sun-damaged skin, reduction of hyperpigmentation, improvement of skin texture, decreasing the appearance of wrinkles and treatment of acne scars.

## What is the unique advantage of EndyMed's 3DEEP RF technology?

3DEEP RF, based on a unique radiofrequency technology, represents

the latest generation in resurfacing technologies. 3DEEP RF fractional technology offers - for the first time - a totally safe, energy-based system that combines depth controlled epidermal fractional ablation with simultaneous delivery of heat deep into the dermis. Sophisticated software personalizes the treatment parameters, assuring minimal discomfort, minimal downtime and maximal safety for your skin.

## Which areas can be treated with 3DEEP Fractional Skin Resurfacing?

3DEEP Fractional Skin Resurfacing is designed to treat those body areas that are frequently exposed to the sun: face, neck, décolleté, and hands or areas susceptible to acne scarring.

FDA clearance for Fractional Skin Resurfacing Applicator

## How many treatments are required to see results?

Results of 3DEEP Fractional Skin Resurfacing can be seen as quickly as one week following a SINGLE

treatment. Additional skin improvement is noticed over time – with continuous improvement up to 3 months after treatment. For more damaged skin or acne scars, 1-2 additional treatments will be needed to enhance the outcome.

## What should you expect after the treatment?

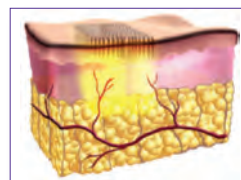

You will be able to cover the treatment area with makeup and resume normal activities about 30 minutes after treatment completion. Any skin swelling and redness will disappear within 2-3 hours after the treatment.

After 2 days, you may notice small, microscopic crusts on the treated area. These crusts are easily covered by makeup and will resolve naturally 5-7 days after the treatment.

Within one week after treatment, your skin will show the benefits of a brighter, smoother look. Four weeks after treatment a collagen remodeling process will start leading to longer term improvement in the condition of your skin.

## How long does the effect last?

The improvement in skin quality should be long lasting, however proper skin care and sun protection will help to preserve the results.

3DEEP Fractional Skin Resurfacing provides a smoother, brighter skin surface and reduced hyperpigmentation. Volumetric deep dermal heating reaches the collagen fibers causing an immediate and long term tightening effect. 3DEEP Fractional Skin Resurfacing effectively treats all skin layers for an optimal result.
